Description [\(revised\)](#)

Here I have a beautiful Regency TR-1 pocket transistor radio. I understand this is the radio that really was the premiere of the popular transistor radio. I don't have a battery to test it but the circuit traces are perfect and the parts are all original and intact. This radio is in very collectible condition and I'm sure there isn't anything wrong with it just by the overall condition. The IF cans still have the wax over them so they are in tact and there is no stress cracks whatsoever on this radio on the board, or the back, or the cabinet. This is a mahogany colored radio and I know it will please most any collector. Read my feedback and have fun bidding.

On Sep-06-05 at 12:37:14 PDT, seller added the following information:

I want to stress again that I don't have a battery to test the radio. I'm assuming it's ok from the condition of it but the radio is over 50 years old and it's 100% original and I don't know if it plays or not. I have read where they may need a cap and although I can replace those things, I didn't do it for fear of hurting its originality to a collector. I'm an avid tube amp collector and I don't like amps that have been tampered with.
